

ELECTRICAL MALPRACTISES

All rights for the pictures contained in this bulletin are protected.

Electrical fires present a hidden hazard for most workplaces and are caused also by electrical malpractices.

Below you will see some pictures from electrical malpractices that can cause a fire.

Make-shift power adaptor

Some people do not know that by watering an electrical panel it does not grow

Tape-use is a well spread but a dangerous temporary maintenance practice

If an electrical panel is no longer in use, it is not sufficient to deactivate it but the safety practice is to remove it completely; in the meantime it should be tagged with a warning sign.

Long- term appliances' connection should always be direct, without the use of a splitter.
