

## Hand & power tools

All rights for the pictures contained in this bulletin are protected.

**Conventional tools should not be used for industrial operations more often than not abandoned.**

**An appropriate tool abandoned in the production area near a mixer of flammable dusts with flammable solvents; accidental falling could cause spark and explosion.**

**Inappropriate specification of hand tools; in this case a safety cutter is compulsory.**

**In such a messy workshop hand tools are most likely to be substandard i.e. inappropriate and poorly maintained.**

**Industrial power tools should not be left unattended**

**Again pneumatic power tools abandoned; these tools require specific knowhow and are extremely dangerous if used by unauthorized personnel**

**Power tool temporary storage, let alone its condition**

**Complete lack of use of PPE during the use of a cement cutter**
