

## Quality and Safety of Buildings

### Improvement

With an independent and certified quality controller, there will be a new form of construction supervision. The quality controller checks, throughout the whole design and execution, the construction engineering requirements. Goal: a better quality building. That is stated in the bill Quality Assurance for Building.

With this, contractors are given more responsibility for their structures. The municipalities remain competent and can act enforcing after signals from the quality controller, third parties or by own observation.

### Facts and Figures
